The Coastal Fold...

The Arabian Sea is one of the most important landscape features of Mumbai. Diverse social, economic and natural fabrics of the city are transected by its coastline, and multiple existences are thus, unfolded.

Versova area situated at the conjunction between a creek and the sea offers one such unique opportunity where intricate relationships are found between the landscape, community and urbanisation.

The Workshop recognises the potential of such a setting, and, taking inputs from multi-disciplinary intellectual exchanges, shall explore ideas and proposals to address the making of environmentally sustainable and socially inclusive spaces.
